

PUMP STATIONS

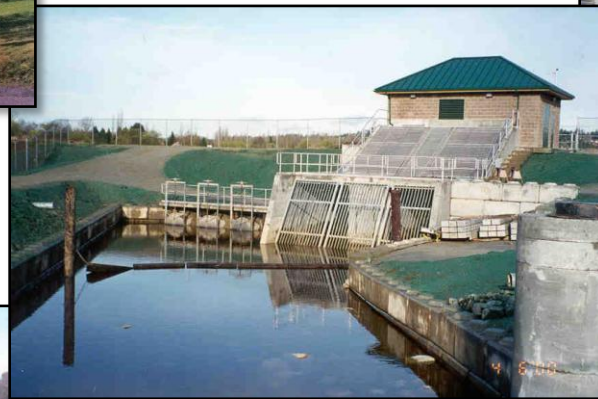

Aplin & Martin Consultants Ltd. leads multi-disciplinary teams of electrical, mechanical and structural consultants on a wide range of storm and sanitary pump station projects. Specializing in both the restoration and rehabilitation of existing stations as well as the planning and design of new stations, Aplin & Martin provides expertise and understanding in the in-depth analysis of flows, intricacies of current station functionality and operation, as well as cost and construction constraints, review of alternatives, geotechnical conditions and preferences of the long-term owner/operators. Recent assignments have included emergency backup generators, emergency storage, odour and noise mitigation, environmentally friendly fish-protection measures, telemetry and SCADA systems, and various operations and maintenance preferences for stations from 25L/s to 4,000L/s.
